This Rule specifies that a variable rate instrument to be paid in 397 calendar days or less shall be deemed to have a maturity equal to the period remaining until the next readjustment of the interest rate.
- (2) This weighted average maturity calculation uses the final maturity of any floating rate instruments held in the portfolio to calculate the weighted average maturity for the pool.

Economic Commentary

Risk assets were under pressure again in April as issues over trade, potentially slowing economic momentum in Europe and building inflation pressures fueled market volatility. China and the U.S. ratcheted up tariff threats before agreeing to begin negotiations. The Trump administration also announced extensions of the steel and aluminum tariff exemptions for the EU, Canada and Mexico, which helped trade concerns to fade slightly. Although Q1 U.S. GDP came in stronger than expected, there were several weaker than expected economic data releases in addition to the backdrop of rising interest rates. The 10-year Treasury yield reached 3% for the first time since 2013, before ending the month at 2.95%. Oil prices rose over the month driven in part by geopolitical tension in the Middle East and potential US withdrawal from the Iran nuclear deal, but also as a result of the OPEC-Russia supply pact, which has helped dissipate the global oil glut. The majority of companies that have reported Q1 earnings so far have beat revenue and earnings estimates, reinforcing the solid fundamentals backdrop.

The US economy is starting 2018 with strong growth momentum. Despite increased risk asset volatility, business and consumer confidence remains elevated and real business investment remains robust. The combination of tax reform and the spending bill will create a significant boost to growth both this year and in 2019. Core CPI is expected to run around an annualized trend pace of modestly above 2% over the coming months. We expect the Federal Reserve under Jerome Powell's leadership will continue to keep the pace of rate hikes "gradual". The median of the committee continues to forecast 3 rate hikes this year. Our base case is the Fed will ultimately raise rate four times in 2018 given our view that the U.S. unemployment rate will trend further below estimates of the non-accelerating inflation rate of unemployment (NAIRU), inflation will continue to rise and global growth will remain supported. The Fed should be able to continue raising rates in 2019 as the fiscal stimulus from the tax and spending bills should have maximum impact in H2 2018 and H1 2019.
