(1) This weighted average maturity calculation uses the SEC Rule 2a-7 definition for stated maturity for any floating rate instrument held in the portfolio to determine the weighted average maturity for the pool. This Rule specifies that a variable rate instrument to be paid in 397 calendar days or less shall be deemed to have a maturity equal to the period remaining until the next readjustment of the interest rate.

(2) This weighted average maturity calculation uses the final maturity of any floating rate instruments held in the portfolio to calculate the weighted average maturity for the pool.

#### **Economic Commentary**

Global equity and credit markets continued to be volatile in November as investors shifted their focus from the ongoing credit concerns in Europe to the potential economic implications of the fiscal cliff in the U.S. Market sentiment was also influenced by developments in the European debt crisis and Chinese growth. U.S. equity markets fell after the presidential election and remained volatile throughout the month as attention turned to negotiations regarding the fiscal cliff. The fiscal cliff refers to a combination of previously agreed upon government spending cuts and increases in a variety of tax rates set to go into effect on January 1, 2013. With just a few weeks before the year-end deadline, the White House and Congress have demonstrated little progress, and markets have continued to swing on news about the potential for a deal or the lack thereof. Failure to come to an agreement on how to handle the challenges imposed by the fiscal cliff could risk putting the U.S. economy back into a recession.

Economic data over the month was mixed, as the effects of Hurricane Sandy caused employment to weaken, and fiscal cliff worries also appeared to weigh on consumption and manufacturing data, while housing improved mildly. It is expected that Congress will move to avert much of the negative impact by year-end, although some fiscal tightening is still expected. Irrespective of a resolution, the uncertainty faced by consumers and business alike should have an adverse impact on growth in the fourth quarter. Due to persistently weak labor markets and the negative impacts of the fiscal cliff, it is expected that the Fed will announce another large-scale asset purchase program at its December meeting. The Fed's current Operation Twist program of buying long-dated Treasuries while selling short-dated Treasuries is set to conclude at year-end. Anticipations are that the Fed to keep its gross purchases constant at \$85 billion per month, in the form of \$45 billion of Treasuries and \$40 billion of mortgage-backed securities. In addition, members of the FOMC have recently discussed revising their communication policy, and it is expected in the near future the Fed will make its forward rate guidance conditional on economic indicators including the unemployment rate and the inflation rate, reflecting the Fed's dual mandate.

#### **Economic Commentary**

Global equity and credit markets were volatile in the fourth quarter as investors shifted their focus from the ongoing credit concerns in Europe to the U.S. elections and the potential economic implications of the "fiscal cliff". U.S. economic data was generally a bit better in the fourth quarter, with housing showing the strongest improvement. After much anticipation, the election was status quo with President Obama re-elected and a Congress that remained divided. U.S. equity markets and short-term interest rates fell as the "fiscal cliff" took center stage. Markets swung back and forth on news about a potential for a deal or lack thereof. Uncertainty remained on concerns that negotiations would be protracted. Finally, Congress was able to pass a last-minute bill at the end of the year that averted the full brunt of the "fiscal cliff." However, the measures, which include higher marginal tax rates for upper income households, higher tax rates for capital gains and dividends, and a higher tax rate on estates, only addressed revenue. Congress put off the more important decisions regarding spending cuts via sequestration and the debt ceiling until February and March. Given the difficulty in reaching the deal on taxes, fiscal uncertainty is likely to linger as the new Congress faces a difficult challenge in seeking agreement on spending cuts. The U.S. officially reached the debt ceiling limit on December 31st, but the U.S. Treasury is undertaking extraordinary measures in order to continue paying its obligations for approximately another two months.

The three major concerns that dominated 2012 appear to have eased as investor fears of a eurozone debt crisis, the fiscal cliff and a Chinese economic hard landing have abated. The conversion of the Fed's Operation Twist to outright open-ended Treasury purchases and the fiscal cliff compromise are positive forces in the U.S. The amount of liquidity being injected into the global financial system by central banks is overwhelming and provides significant monetary conditions for a recovery. The transmission mechanism into economic growth has not yet been triggered, but the likelihood of this happening in the near-term has increased. However, while central banks have reduced tail risks, the ongoing political struggle in the U.S. over spending cuts and the debt ceiling creates significant uncertainty.
