Economic Commentary

Global growth dynamics shifted in the first quarter. Economic momentum in the eurozone started to build while the U.S. was weaker than expected in most areas. However, it was the aggressive stimulative efforts of the European Central Bank and the recent dovish turn in the U.S. Federal Reserve Open Market Committee (FOMC) communications that held market attention. Markets and the media continued to obsess over the timing of the first rate hike from the Fed, despite weakening global inflation as a result of falling oil prices and monetary policy easing by more than two dozen central banks. Economic data released in the first quarter disappointed. Several factors partly explained the relative weakness – such as frigid temperatures and heavy snowstorms in the Northeast and Midwest and the shutdown of major West Coast ports. However, as these factors recede and consumers spend their gas savings, growth in the second quarter and beyond should accelerate. The FOMC met twice during the quarter, eliminating its forward rate guidance altogether at its March meeting as it removed the word 'patient' from its statement on monetary policy, while leaving intact the language on 'data dependency' as a determinant for future fed funds rates. The Committee also revised lower its Summary of Economic Projections, estimating GDP growth over the next two years will be slower than previously expected due to the drag from net exports. They also revised their estimates of the longer-run unemployment rate down as wage inflation has yet to materialize. Consequently, the Committee's rate expectations over the next few years also shifted lower. Since the beginning of the year, U.S. Treasury rates have fallen, nearly \$2 trillion of government debt across the globe is trading at negative yields and more than 20 central banks have eased. 2015 is on track to be a year dominated by aggressive and, potentially divergent, central bank monetary policies. Despite gradually improving economic conditions in much of the world, inflation remains stubbornly low; and weaker oil prices and a stronger dollar are impacting markets near and far. In the U.S., the FOMC has ostensibly committed to raising ratings in or around September. The Fed recognizes that the economic environment is far better than it was when it moved to a zero interest rate policy. The labor market is improved and emergency liquidity is seemingly unnecessary. Nevertheless, the Fed also recognizes that there's very little pressure on core inflation, and that a strengthening dollar has already tightened financial conditions. The Fed is clearly looking for signs of a move back toward 2% inflation, in particular wage inflation, and has essentially pushed back the market's expectation for an initial tightening from June to September.
