Economic Commentary

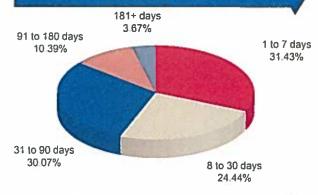

Markets entered the fourth quarter uncertain about the next move by the Federal Reserve. However as the fourth quarter got under way, U.S. labor markets showed strength, inflation stabilized and appeared to resurface in wages, and financial conditions improved, doubts began to fade as the Fed set the stage for a hike in rates at its December 16th meeting. U.S. Treasury yields moved higher as the meeting approached, leading to a muted reaction in the bond market during and after the announcement. The growing divergence between the manufacturing and service sectors remains unsustainable. The industrial side of the U.S., while small will need to stabilize in order for the economy to experience growth at or above 2.5% in 2016. The domestic service economy should remain the source of stability in the year ahead. The pace of job gains is likely to slow in 2016 as labor market slack erodes, but this should be supplemented by stronger wage gains and accelerating total income. Against the backdrop of solid income growth, elevated savings, high confidence, improved access to credit and lower energy prices, the consumer is expected to increase spending in 2016. The outlook for global growth remains a concern, particularly for China. China's expected currency devaluation will exert downward pressure on U.S. net trade. The U.S. economy is not growing at a pace that can withstand a more pronounced global slowdown. After raising rates in December for the first time since 2006, the Fed is expected to follow a gradual pace of tightening in 2016. The Fed is forecasted to raise rates three times in 2016. Only a large miss on the economic data front or some significant unforeseen event will likely deter the Fed from achieving its goal.
