#### Definition of Weighted Average Maturity (1) & (2)

- (1) This weighted average maturity calculation uses the SEC Rule 2a-7 definition for stated maturity for any floating rate instrument held in the portfolio to determine the weighted average maturity for the pool. This Rule specifies that a variable rate instrument to be paid in 397 calendar days or less shall be deemed to have a maturity equal to the period remaining until the next readjustment of the interest rate.
- This weighted average maturity calculation uses the final maturity of any floating rate instruments held in the portfolio to calculate the weighted average maturity for the pool.
  - The maximum management fee authorized for the TexSTAR Cash Reserve Fund is 12 basis points. This fee may be waived in full or in part in the discretion of the TexSTAR co-administrators at any time as provided for in the TexSTAR Information Statement.

## Economic Commentary

Flaring trade tensions and softening growth momentum hung over markets in May, leading to a selloff in equities and to wider credit spreads. The trade narrative shifted when the Trump administration abruptly raised tariffs on \$200 billion of Chinese imports from 10% to 25%, and announced its intention to expand the 25% tariffs to the remaining \$300 billion of imports from China. Beijing promptly retaliated by announcing it would raise tariffs to 25% on \$60 billion of U.S. goods. Furthermore, the Trump administration threatened to impose auto tariffs on the European Union (EU) and Japan and to add 5% tariffs on Mexican goods with the potential for these tariffs to reach 25% by October. The tariffs on Mexico are expected to go into effect as soon as June 10, at the same time as the China tariff increases.

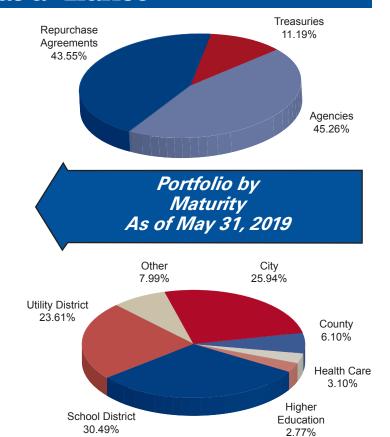

Government bond yields plunged in the flight to quality move. Rates rallied across the curve and the probability of a Fed rate cut by year end, as measured by Fed Funds futures, rose to over 90% by the end of the month. The domestic drivers of U.S. growth continue to remain intact and consumption will continue to be the bedrock of growth in Q2 despite negative trade headlines. The boost from fiscal spending will start to fade in the second half of 2019 likely resulting in a manageable but noticeable slowdown. Additional headwinds for the second half of the year include a slowdown in business investment if a trade deal is not reached and financial conditions deteriorate. Following the Federal Open Market Committee meeting early in May, we expected the Fed to remain comfortable with its neutral stance for most if not all of 2019. However, growing downside risks suggest the next Fed move will likely be a rate cut. Perceived downside risks to growth accompanied by a significant tightening in financial conditions and slowing in the manufacturing sector as well as business and consumer confidence represent some of the key factors that could lead to a rate cut in 2019.
